FRANCIS YANG

ABOUT ME

Full-stack web developer UC San Diego graduate. I discovered a passion for coding while taking CS classes in university, and ultimately decided to pursue it full-time post graduation by taking additional education with the UC Berkeley full-stack coding bootcamp. I specialize in front-end as well as most Javascript-related back-end database technologies, but also have experience with Shopify Liquid, Python (data visualizations and SQlalchemy), and C##. Additionally, I bring real-world experience and have worked on UI/UX/with UI/UX experts due to multiple freelance jobs working for aspiring Shopify entrepreneurs. Currently looking to enter the job market via a junior position and work on some cool stuff!

EXPERIENCE

Upwork, Remote — *Freelance Shopify Web Developer*
SEPTEMBER 2022 – PRESENT

- Worked multiple jobs as a Shopify web developer, allowing my to hone my front end skills
- Required communication, availability, and flexibility, as the nature of freelance work means that nothing follows a set schedule and your client can require you to hop in a call/meet a deadline at a moment's notice

The Bistro (UCSD), La Jolla — *Student Lead / Service Worker*
FEBRUARY 2021 – JUNE 2022

- Lead position as a student worker at the on-campus eatery The Bistro
- Position mostly entailed managing the other students who were on-shift and making checks before and after service to open/close the building
- Also included typical food service worker responsibilities such as seating customers, taking orders, and sending out meals

EDUCATION

University of California, San Diego, La Jolla — *Cognitive Science (Neuroscience)*

SEPTEMBER 2019 – JUNE 2023

One of two majors that I held in college. Although I didn't choose to pursue a career in my Neuroscience specialization, because Computer Science was considered as one of the fields under the umbrella of "Cognitive Science", I had to take some CS classes as electives which acted as the gateway that piqued my interest in the field.

University of California, San Diego, La Jolla — *Music*

SEPTEMBER 2019 – JUNE 2023

The other of two majors that I held in college. I initially intended to do research concerning the effects of music on the brain, but ultimately dropped that in favor of CS. Although I didn't pursue this field professionally, I do still compose music on the side as a hobby.

University of California, Berkeley, Remote — *Full Stack Web Development*

JUNE 2023 – NOVEMBER 2023

Web Development bootcamp from UC Berkeley. The chosen bootcamp was part-time instead of full-time since it was started while I was still in the last month of university. Reinforced front end skills while also teaching React as well as a number of back-end technologies such as node, MySQL, GraphQl, and MongoDb.

SKILLS

- **Front End Technologies**
  - HTML
  - CSS
  - Javascript
  - Liquid
  - React
- **Back End Technologies**
  - MySQL
  - GraphQl
  - NoSQL
  - Python
  - Javascript
  - node
- **Other Skills**
  - Data structures/algorithms (LeetCode)
  - Data visualization (Seaborn, pandas)
